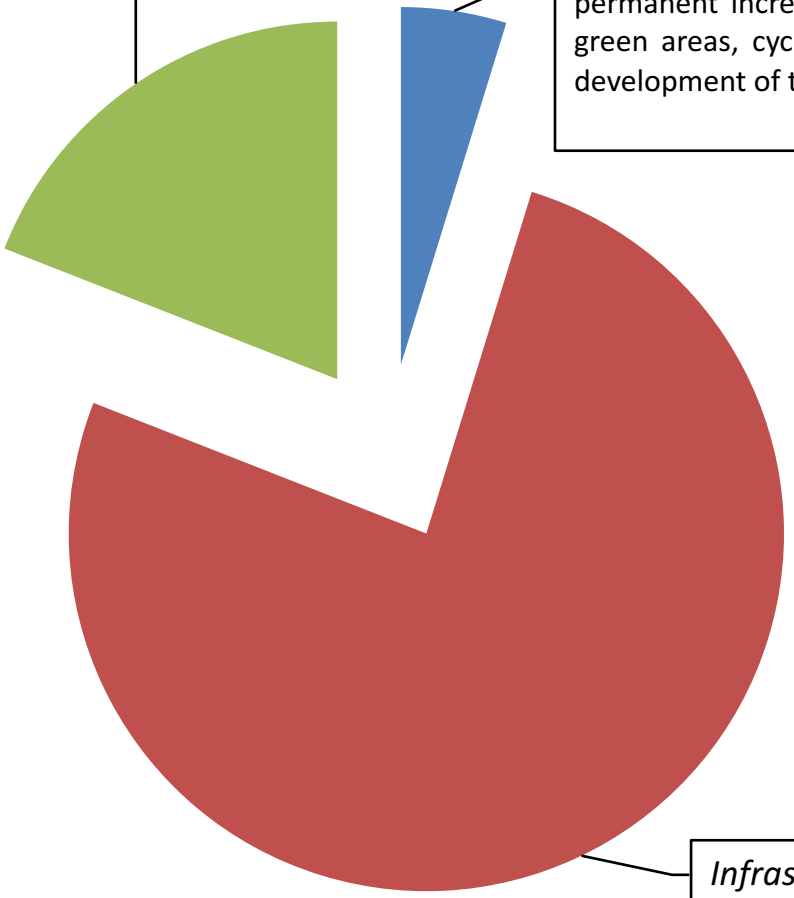
Re-training of workforce to amplify the GDP multiplier effect

Re-train the workforce of the territory so that it can be used as a primary source of employment for the construction of infrastructures and to reduce the importation of labor from other territories.

Social Purpose – Environment preservation

Launch social support projects to encourage the expansion of the local workforce supply in the territory (e.g. free nurseries, extension of school hours, reorganization of the rents market)

Carry out urban and environmental regeneration projects to foster a permanent increase in the perceived quality of life (e.g. creation of green areas, cycle paths, pedestrian areas) and to not penalize the development of the tertiary sector linked to the tourist industry



Infrastructure Building & Restoration

The SPV should finance the development of basic infrastructure and the rebuilding of depleted infrastructure at the local level.
